Sewer Capacity Charges

Commercial Class

Case-by-Case and Industrial..... \$6,281 x

Times the number of connection units

Contact the District for additional information on calculating the number of connection units and total fees.

All Customers with:

- | | |
|--|---|
| • Flows greater than .005 MGD, or | • All intermittent users |
| • Concentrations greater than 650 milligrams per liter BOD, or | • Any commercial or industrial customer requesting and paying the full cost of projecting flow and concentrations of discharge. |
| • 1,000 milligrams per liter SS | |

Mixed Usage. See Customer Class

Calculation of connection charges for parcels of property which contain customers in more than one customer class shall be based on the pro rata proportion of building square footage used by each customer.

Notes and Definitions: When calculating capacity, the entire parcel area is included in calculation. All lands appurtenant to the premises, including parking areas incidental thereto shall be included.

BOD or Biochemical Oxygen Demand, is a measure of strength of sewage expressed in terms of the amount of oxygen required by bacteria to render swage inert.

SS or Suspended Solids are a measure of strength of sewage expressed in terms of quantity of solid material measured in milligrams within a liter of sewage.

HCF – Hundred Cubic Feet
